### PREFATORY NOTE

The Royal Signals Pocket Book is issued to officers who require data relating to communications in a handy form for reference in the field. It is based on the existing manuals and Signal Training Pamphlets, to which reference should be made if fuller details are required, and does not constitute an authority for changes in doctrine or for demanding stores.

The book consists of a number of parts, numbered and titled as follows :—

Part I.—Graphical symbols for signal equipment.

Part II.—Wireless diagrams.

Part III.—Line diagrams.

Part IV.—Circuit utilization.

Part V.—Line data.

Further parts will be added as required.

Details of items of signal equipment will not be published in the Royal Signals Pocket Book, since they are already issued (as “Data Summaries”) in a separate cover, uniform in size with this volume, through REME channels to those concerned.

### DISTRIBUTION

The distribution of the various parts is different and will be found at the beginning of each part.
